## WE DRIVE CHANGE WITH RESPONSIBILITY.

## CO<sub>2</sub> Infrastructure Report for Climate-Responsible Events

### What is the CO<sub>2</sub> Infrastructure Report?

With our CO<sub>2</sub> Infrastructure Report, we offer you, as a guest organizer, a transparent overview of the emissions generated within our infrastructure during your event.

The report covers emissions from:

- Electricity and energy consumption (heating, cooling, lighting)
- Water consumption
- Waste generation
- Printed materials and signage ordered through Messe und Congress Center Basel

This data is calculated individually for your event, adjusted for location, season, number of visitors, and event duration.

### Why is this important?

The data helps you to evaluate your event from an environmental perspective, identify potential for optimization, and make informed decisions for more sustainable planning. This makes climate protection measurable and transparent for participants, sponsors, and partners.

### Contact & support

Please feel free to contact us with any questions or comments:

### CO<sub>2</sub> compensation option

In collaboration with the renowned climate protection agency SwissClimate, we offer you the opportunity to directly offset your infrastructure-related carbon footprint.

Choose from certified Swiss projects such as:

- Methane reduction in dairy cows
- Sustainable forest management in the canton of Schwyz
- Biogas plants on farms
- Biochar projects in Switzerland and the EU

We are happy to coordinate this for you, including certification and official verification.

### Your added value

- Measurable transparency regarding infrastructure emissions
- Option for voluntary CO<sub>2</sub> offsetting
- Strengthening your sustainability communication
- Contribution to a shared climate-responsible future
